EDUCATION

Bachelor of Computer Science,
Trinity Western University, Langley, BC

Expected Grad: Dec 2027

EXPERIENCE

Software Developer Intern, Pilotfish

May 2025 – Aug 2025

Technologies: Python, Rewst, Django, HTML/CSS

- Developed a Django-based customer portal integrating Microsoft 365 services to provide real-time access to client assets, licensing, invoices, and support tickets, reducing manual support requests by ~70%.
- Designed and implemented Python automation workflows that classified and synchronized managed device data across client environments, eliminating manual asset management processes.
- Integrated backend services and APIs to securely retrieve, process, and present operational data from multiple business systems.

TECHNICAL PROJECTS

Capalation - Mobile Photo Competition App ([Website](#))

Technologies: React Native (Expo), Supabase, Stripe, RevenueCat, Google Cloud Vision, TypeScript

- Architected and developed a cross-platform social platform enabling photo competitions, real-time voting, and user-generated content management.
- Built internal administration tools for moderation, appeals management, subscription control, notifications, and user account operations.
- Integrated AI-powered image moderation and backend services using Google Cloud Vision, Supabase, and TypeScript.

High-Performance API Gateway ([GitHub](#))

Technologies: Go, PostgreSQL, Redis, React, Docker

- Built an API gateway in Go supporting API-key authentication, per-key caching, and configurable rate limiting through a reverse-proxy architecture, sustaining ~16.7k requests/sec with 0 errors at 500 concurrent clients in benchmark testing.
- Designed concurrency-safe caching and rate-limiting systems with configurable policies and TTL-based expiration, adding only ~0.5 ms p50 latency to requests.
- Identified and resolved upstream connection-pool exhaustion causing 502 errors under load, increasing throughput 15× and reducing p99 latency from 653 ms to 18 ms.

LEADERSHIP

Founder & President of 3D Printing & Modelling Club

Sept 2025 – Apr 2026

Technologies: Blender, Bambu Studio

- Founded Trinity Western University's first 3D Printing & Modelling Club and organized workshops on CAD, additive manufacturing, and rapid prototyping.
- Led club operations, event planning, and budgeting while managing a student executive team and coordinating with university stakeholders.

SKILLS

Languages: Go, Java, C++, Python, TypeScript, JavaScript, SQL

Tools & Frameworks: Django, React Native, PostgreSQL, Supabase, Git, Docker, REST APIs
